Cloud Computing for Small and Mid-Sized Businesses

Take Your Business to the Next Level with Cloud Based IT Solutions

Cloudspace USA

THE NEXT GENERATION INTERNET COMPUTING

Cloud Based Solutions For SMB

Our Cloud Based Services for Small and Mid-Sized Businesses (SMB) address all your crucial information technology, operations, and budget needs, with affordable, secure, and flexible solutions. You deserve an approach tailored to your industry, your business approach, and your budget.

Whether your business is young and growing, or established and stable, our solutions packages can be tailored to fit your industry and business model. Whether your goals are to reduce your 'lumpy' technology spend, enhance your data security, enable and deploy a mobile workforce, or all of these, our solutions-based approach will have you covered.

Our Focus is On You and Your Business

While our solutions are technology based, it is how we apply these technologies that makes the difference. After completing our assessment of your business' IT needs, we will set up virtual desktops with the required software and an option for dedicated servers for file storage and application deployment.

Our solutions work better because we focus on you and your business to understand which IT services are crucial to your success.

Welcome to the Cloud

THE CLOUDSPACE DIFFERENCE

What is distinctive about our approach is our "process" for combining the technical service ingredients to exactly fit your unique and specific needs. We spend the time with you up front to understand your business and IT needs. Then we design a solution that answers those needs to deliver the benefits that will help drive your business to greater efficienceis and success.

SMALL BUSINESS PACKAGES…

Cloudspace USA offers small businesses the flexibility they need to succeed. For contracts with 5 or more users, we will set up virtual desktops with an option for dedicated servers for file storage and application deployment.

Cloudspace USA can deploy your applications for you or you can use your admin privileges on the server and workstations to deploy your own software and/or custom configurations. Our small business packages will support from 5 - 100 accounts.

SERVICES INCLUDE:

Virtual Desktop Hosting
Virtual Server
Virtual Phone System
SalesNexus CRM

YOUR BUSINESS BENEFITS FROM…

- **Reduced IT capital expenditures** on hardware and software;
- **Reduced downtime** so more time is spent on productive work;
- **Reduced lost opportunity costs** means you can take full advantage of opportunities for growth;
- **Increased productivity** so your employees are more profitable;
- **Enhanced data security** so your business operations and records are not vulnerable.

Web 3.0 is Here!

David Levin
Founder and CEO
Cloudspace USA

Since the 60's, business computing has developed along a number of lines with the Web and Web 2.0 being the most recent evolutions. The original Web included basic websites and e-commerce. Web 2.0 introduced blogs, social networking, cloud based storage and applications, and other hosted services.

But today everything is changing in business computing – because Web 3.0 now offers full computing in the cloud for virtually every business, Companies large and small are choosing not to purchase new hardware and software, but instead to move their network operations to the cloud.

While large enterprises have been using private cloud services for several years, it was only when significant Internet bandwidth became affordable, around the turn of the millennium, that cloud computing became a reality for small to midsized businesses.

Why make large capital expenditures with high and unpredictable maintenance costs, when you can rent it monthly along with an IT staff and significantly reduce your business risk? In many cases, the cost savings in telecommunications alone for a multi-office business saves enough to pay for the whole cloud service!

Web 3.0 is the virtual private cloud, a full-capability, local area network for any size business in a completely cloud-based, virtual private infrastructure. This includes servers, applications, updates, backups, workstations, antivirus, email, spam filter as well as monitoring and managing the network. Companies no longer have to buy application software, you can just rent it with your private cloud network. Accessible from anywhere, your virtual private cloud is secure and reliable, housed in disaster hardened data centers and maintained 24/7.

With Web 3.0 and Cloudspace USA – the next generation internet computing – you can take your business to the next level.

Your Neighborhood Cloud Experts

Our services may be in the cloud, but our team of experts are proud to live and work here in Houston!

We are your neighbors, working right alongside you and your staff. Our data storage, technical infrastructure, and service professionals are all here, too.

While we appreciate the cost-benefits that going 'off shore' can bring, we are proud to deliver high value services at attractive pricing by utilizing the economies of cloud computing and focusing on service and support.

We take great satisfaction in being locally grown – being USA – and in being your neighbors.
